Why is data center commissioning important?

Commissioning is a requirement for LEED certification, and LotusWorks' LEED-accredited teams can help clients create energy-efficient facilities that meet environmental standards. Data center commissioning is an essential process for ensuring the highest levels of performance, reliability, and uptime in data center facilities.

What is a data center commissioning process?

The data center commissioning process is not set in stone and may vary with different commissioning agents. Possible variants of data center commissioning are: Examining all operational, failure, and maintenance situations. Testing every conceivable condition or circumstance through a series of tests and their iterations.

What happens if you fail to commission a data center?

Failing to engage a trusted partner early in the process of commissioning a data center can lead to costly mistakes, delays, and equipment issues down the line. These mistakes affect more than your bottom line -- they can have a real impact on the safety of your employees and your reputation. What is Commissioning?

Does data center commissioning align with your project requirements?

We confirm that it aligns with your specific project requirements. Data center Commissioning is a structured process. It ensures all systems and components within a data center function as intended. It involves a series of tests and inspections.
