-----

In line with the strategic plan for emerging industries in China, renewable energy sources like wind power and photovoltaic power are ...

Abstract Mobile energy storage (MES) has the flexibility to temporally and spatially shift energy, and the optimal configuration of MES shall significantly improve the active distribution network ...

This contribution proposes an active distribution network architecture that considers symmetrical source and load access and constructs an active distribution network optimization ...

Therefore, mobile energy storage systems with adequate spatial-temporal flexibility are added, and work in coordination with resources in an active distribution network and repair ...

In the power market, the reasonable configuration of the energy storage (ES) system can improve the reliability and economy of the active distribution network system. First, ...

The results confirmed the active distribution network-grid planning model for dynamic configuration of energy storage systems. Both Example 2 and Example 3 had 3 ESS ...

An active distribution network (ADN) is defined as a distribution network equipped with systems to control a combination of distributed energy resources (DERs), allowing the distribution network ...

This paper proposes a complementary reinforcement learning (RL) and optimization approach, namely SA2CO, to address the coordinated dispatch of the energy ...

This chapter starts by introducing the various energy storage systems, followed by the physical model for the

optimal dispatching of active distribution networks (ADNs).

A multi-objective optimization method for energy storage optimization in active distribution networks with multiple microgrid is proposed to address the low utilization of renewable energy ...

decision method for energy storage location and capacity optimization allocation model in the active distribution network is proposed in this paper.

The complexity and nonlinearity of active distribution network (ADN), coupled with the fast-changing renewable energy (RE), necessitate advanced real-time and safe dispatch ...

Abstract Mobile energy storage systems (MESSs) possess significant temporal and spatial flexibility, making them ideal for ancillary services in active distribution networks ...

Abstract Mobile energy storage (MES) has the flexibility to temporally and spatially shift energy, and the optimal configuration of ...

The distribution network needs to meet increasing load demand and accommodate a large quantity of renewable energy injections. This trend together wit...

In recent years, with the rapid development of renewable energy, the penetration rate of renewable energy generation in the active distribution network (ADN) has increased. ...

A decision method for energy storage location and capacity optimization allocation model in the active distribution network is proposed in this paper. The sensitivity analysis ...

This work presents an approach of finding the optimal location and size of battery energy storage system (BESS) in a distribution network with dis-tributed generation (DG) in order to reduce ...
