Who manages a community solar project?

The host is the owner of the location where the community solar project will be located. The sponsor manages the subscriptions to the solar project and the relationship with the utility. The project sponsor and project host can be the same.

What is a community solar project?

All community solar products convey some part of the financial benefit to subscribers. Community solar products may also include nonfinancial benefits, such as environmental benefits (e.g., renewable energy certificates). There are always at least four actors in a community solar project: the host, the sponsor, the utility, and the subscribers.

What is a community-owned solar project?

Community-owned solar: A solar project that is wholly owned by local members of a community. Power purchase agreement (PPA): A long-term electricity supply agreement between an electricity producer and an electricity consumer. Project host: The owner of the site where the community solar project will be located.

How does a community solar program work?

Subscribers opt into the program, either through contractual payments or some nonfinancial transaction. All community solar products convey some part of the financial benefit to subscribers. Community solar products may also include nonfinancial benefits, such as environmental benefits (e.g., renewable energy certificates).
