How much electricity does New York produce?

In 2023, New York had a total summer capacity of 40,230 MW through all of its power plants, and a net generation of 124,039 GWh. In 2024, the electrical energy generation mix was 48.7% natural gas, 21.3% hydroelectric, 20.6% nuclear, 4.6% wind, 2.6% solar, 1.2% biomass, 0.3% petroleum, and 0.8% other.

How much power does New York have in 2023?

The list is located in Table III-2 of the report. In 2023, New York had a total summer capacity of 40,230 MW through all of its power plants, and a net generation of 124,039 GWh.

What is New York's energy mix in 2024?

In 2024, the electrical energy generation mix was 48.7% natural gas, 21.3% hydroelectric, 20.6% nuclear, 4.6% wind, 2.6% solar, 1.2% biomass, 0.3% petroleum, and 0.8% other. Small-scale solar including customer-owned photovoltaic panels delivered an additional net 4,526 GWh to New York's electricity grid in 2024.

How much solar power does New York generate?

Small-scale solar including customer-owned photovoltaic panels delivered an additional net 4,526 GWh to New York's electricity grid in 2024. This was about 33 percent more than the amount generated by the state's utility-scale photovoltaic plants.

If you want to experience the highest rated Restaurants in Harleysville, PA, come check out the Energy Station today!

SRP is involved in a number of major power plants and generating facilities in Arizona and the Southwest. Learn about each generating station here.
