How much does a ground-mounted solar system cost?

Ground-mounted solar panels operate like a typical rooftop system but are generally more efficient. Ground-mounted solar panel installations cost about \$61,880 on average before incentives. They're usually more expensive than roof-mounted systems, but can maximize your renewable energy production depending on your roof's orientation and shading.

Why should you choose a ground-mounted solar system?

With a ground-mounted system, you can choose the orientation of your solar panels to increase energy production. Ground-mounted systems also tend to operate more efficiently because they have more air circulation beneath the panels, allowing them to stay cool. Ground-mounted solar panels are easily accessible for cleaning and maintenance.

What is a pole-mounted solar system?

Pole-mounted solar systems support multiple solar panels on a single pole and elevate panels higher off the ground than a standard ground mount. Pole-mounted solar often incorporates solar tracking systems, which automatically tilt the solar panels to capture the optimal amount of sunshine.

Should I choose a roof or a ground-mounted solar system?

If your roof works for solar and can fit enough solar panels to meet your energy needs, it's usually best to choose rooftop solar panels. If you need a really large system that won't fit on your roof and you have enough open land, opt for ground-mounted panels.
